

XiteBio® PulseRhizo®

Healthier Plants. Better Yields.

Seed Treatment Compatibility

Compatible Seed Treatment Product Choices	Pea, Lentil & Faba Bean On-Seed Planting Window
Allegiance FL	48 hours
Apron Advance	48 hours
Apron Maxx RFC	48 hours
Apron Maxx RTA	48 hours
Cruiser 5FS	48 hours
Cruiser Maxx Vibrance Pulses	48 hours
Earth Smart Seed Treatment	48 hours
Insure Pulse	24 hours*
INTEGO Solo	48 hours
PreCede Pulse	48 hours
Rancona	24 hours*
Sombrero 600 FS	24 hours*
Trilex AL	48 hours
Trilex EverGol	48 hours
Vibrance Maxx	48 hours
Vibrance XL	48 hours
Vitaflo 280	48 hours
Stress Shield 600	24 hours*

In-Furrow Tank-Mix Fertilizer Compatibility

Compatible In-Furrow Fertilizer Product Choices	Pea, Lentil & Faba Bean Tank-Mix Planting Window
Arise	8 hours
Kalibrate	8 hours
XiteBio Yield+	8 hours

*treat and seed same day

NOTE: PulseRhizo® may be applied with approved seed treatment products either simultaneously, sequentially, or in a tank mix (slurry). If a tank mix is used, the mixture must be applied to the seed immediately and only the amount that can be applied to the seed in an hour should be premixed.

XiteBio® PulseRhizo®

Healthier Plants. Better Yields.

Terms Used in Seed Treatment:

On-Seed Planting Window:

The on-seed planting window is the length of time before the seed is planted that the minimum required number of rhizobia in the inoculant will survive on the seed beginning from the time of inoculation. This on-seed planting window is determined through a series of analytical tests.

Dry Sequential:

With dry sequential application, the seed treatment is first applied and allowed to dry. Once the seed treatment has dried, the inoculant is applied. The duration of time needed for the seed treatment to dry after application may vary based upon many factors, including the relative humidity and seed treatment formulation.

Tank-Mix:

With a tank-mix application, the inoculant and seed treatment are mixed in a single tank and applied to the seed together as a solution/suspension via the same applicator. When the inoculant is applied as part of a tank-mix, the on-seed planting window is based on the requirement that the mixture is applied to the seed immediately and that only the amount that can be applied to the seed in an hour is premixed.

Simultaneous or Wet Sequential

With wet sequential (also called simultaneous) application, the inoculant and seed treatment are applied to the seed from separate tanks at the same time. Unlike tank-mix application, the seed treatment and inoculant must be applied by separate nozzles, first mixing upon reaching the seed.
