

Liquid Soybean Inoculant

XiteBio Technologies Inc. • 855-948-3246 • Winnipeg, MB • www.xitebio.ca

XiteBio Technologies Inc. – an ag biotech company – develops biological products including inoculants for agriculture.

One of the company's products is XiteBio® SoyRhizo liquid inoculant with Advanced Growth Promoting Technology (AGPT) for soybeans.

"XiteBio SoyRhizo consistently shows outstanding performance in soybean fields across many environmental conditions throughout the U.S. Midwest and eastern and western Canada," says President and CEO Dr. Manas Banerjee. "With AGPT, XiteBio SoyRhizo adds fresh nitrogen-fixing rhizobia to the seed while also stimulating the soil's background native microbial populations. This creates

synergy and increases the inoculant's effectiveness regardless of the history a field has with soybeans.

"The native microbes in the soil (e.g., bacteria) are stimulated by AGPT. This is what makes AGPT a revolutionary technology," Banerjee says.

Features

- Active ingredient: 2×10^9 *Bradyrhizobium japonicum* per gram.
- Supplied as a ready-to-use seed-applied or in-furrow unique liquid formulation.
- Seed application rate of 2.0 fl. oz. per 60 lbs. (60 ml./27 kg.) of seed.
- Compatible with most popular soybean seed treatments.
- Extended shelf life (two seasons).

XiteBio® SoyRhizo inoculant.

- Natural and GMO-free product.

"In 2011 trials, XiteBio SoyRhizo produced a nine bushel per acre average yield increase," says Banerjee.
