Sunalta Boron	8 hours
Soygreen [®] - Low Rate	6 hours
Soygreen [®] - High Rate	—
XiteBio [®] Yield+	8 hours

On-Seed Planting Window: The length of time before the seed is planted that the minimum required number of rhizobia in the inoculant will survive on the seed beginning from the time of inoculation. Determined through a series of analytical tests.

Dry Sequential Application: The seed treatment is first applied and allowed to dry. Once the seed treatment has dried, the inoculant is applied. The duration of time needed for the seed treatment to dry after application may vary based upon many factors, including the relative humidity and seed treatment formulation.

Tank-Mix Application: The inoculant and seed treatment are mixed in a single tank and applied to the seed together as a solution/suspension via the same applicator. When the inoculant is applied as part of a tank-mix, the on-seed planting window is based on the requirement that the mixture is applied to the seed immediately and that only the amount that can be applied to the seed in an hour is premixed.

Wet Sequential (Simultaneous) Application: The inoculant and seed treatment are applied to the seed from separate tanks at the same time. Unlike tank-mix application, the seed treatment and inoculant must be applied by separate nozzles, first mixing upon reaching the seed.

Senator® PSP	120 days
Vibrance® Maxx	120 days
Vibrance® Maxx RFC	120 days
Vitaflo® 280	64 days
Warden® CX	64 days

Application Rates: 27 mL/27 kg or 0.9 fl oz/bu of seed / 0.75 fl oz/140k unit = (50lb)

NOTE: SoyRhizo® XV may be applied with approved seed treatment products either simultaneously, sequentially, or in a tank mix (slurry). If a tank mix is used, the mixture must be applied to the seed immediately and only the amount that can be applied to the seed in an hour should be premixed.

Note: All products listed in this chart have been tested according to samples provided to XiteBio Technologies Inc. However manufacturing quality can vary from lot to lot of an individual product. It is recommended that a jar test be completed prior to mixing to ensure physical compatibility. For more information on performing a jar test please visit xitebio.ca/inoculant-and-biological-faqs/
