## Seed Treatment Compatibility

| Compatible Seed Treatment Product Choices                    | Soybean On-Seed Planting Window |
|--------------------------------------------------------------|---------------------------------|
| Allegiance <sup>®</sup> FL                                   | 64 days                         |
| Apron Maxx <sup>®</sup> RFC                                  | 120 days                        |
| Apron Maxx <sup>®</sup> RTA <sup>®</sup>                     | 120 days                        |
| Cruiser <sup>®</sup>                                         | 120 days                        |
| Cruiser Maxx <sup>®</sup> Vibrance <sup>®</sup> Beans        | 120 days                        |
| Clariva <sup>®</sup> pn                                      | 64 days                         |
| EverGol <sup>®</sup> Energy                                  | 64 days                         |
| EverGol Energy <sup>®</sup> + Stress Shield <sup>®</sup> 600 | 30 days                         |
| Fortenza <sup>®</sup>                                        | 64 days                         |
| Hibrix <sup>™</sup>                                          | 28 days                         |
| ILeVO <sup>®</sup>                                           | 64 days                         |
| Insure <sup>®</sup> Pulse                                    | 64 days                         |
| PreCede <sup>®</sup> Soybean                                 | 64 days                         |
| Rancona <sup>®</sup> Apex                                    | 120 days                        |
| Rancona <sup>®</sup> RS                                      | 120 days                        |
| Rancona <sup>®</sup> Trio                                    | 120 days                        |
| RhiZone V                                                    | 120 days                        |
| Saltro <sup>®</sup>                                          | 60 days                         |
| Senator <sup>®</sup> PSP                                     | 120 days                        |
| Vayantis <sup>®</sup> IV RFC                                 | 90 days                         |
| Vibrance <sup>®</sup> Maxx                                   | 120 days                        |
| Vibrance <sup>®</sup> Maxx RFC                               | 120 days                        |
| Vitaflo <sup>®</sup> 280                                     | 64 days                         |
| Warden <sup>®</sup> CX                                       | 64 days                         |

**Application Rates:** 27 ml/27 kg (0.9 fl oz/bu of seed; 1 bu = 60 lb)

*NOTE: SoyRhizo<sup>®</sup> XV may be applied with approved seed treatment products either simultaneously, sequentially, or in a tank mix (slurry). If a tank mix is used, the mixture must be applied to the seed immediately and only the amount that can be applied to the seed in an hour should be premixed.*

## In-Furrow Tank-Mix Fertilizer Compatibility

### Terms Used in Seed Treatment:

**On-Seed Planting Window:** The on-seed planting window is the length of time before the seed is planted that the minimum required number of rhizobia in the inoculant will survive on the seed beginning from the time of inoculation. This on-seed planting window is determined through a series of analytical tests.

**Dry Sequential:** With dry sequential application, the seed treatment is first applied and allowed to dry. Once the seed treatment has dried, the inoculant is applied. The duration of time needed for the seed treatment to dry after application may vary based upon many factors, including the relative humidity and seed treatment formulation.

**Tank-Mix:** With a tank-mix application, the inoculant and seed treatment are mixed in a single tank and applied to the seed together as a solution/suspension via the same applicator. When the inoculant is applied as part of a tank-mix, the on-seed planting window is based on the requirement that the mixture is applied to the seed immediately and that only the amount that can be applied to the seed in an hour is premixed.

**Simultaneous or Wet Sequential** With wet sequential (also called simultaneous) application, the inoculant and seed treatment are applied to the seed from separate tanks at the same time. Unlike tank-mix application, the seed treatment and inoculant must be applied by separate nozzles, first mixing upon reaching the seed.

**Note:** All products listed in this chart have been tested according to samples provided to XiteBio Technologies Inc. However manufacturing quality can vary from lot to lot of an individual product. It is recommended that a jar test be completed prior to mixing to ensure physical compatibility. For more information on performing a jar test please visit <https://xitebio.ca/inoculant-and-biological-faqs/>
