Please See Reverse Side for In-furrow Tank-Mix Compatibility

Terms Used in Application:

Early-Post Tank-Mix with Herbicide/Pesticide:

With an early-post tank-mix application, the biological and herbicide/pesticide are mixed in a single tank and sprayed together as a solution/suspension via the same applicator. Early-Post tank mixes must be applied from the 0 to 6 leaf stage. The tank-mix planting window is the length of time the grower has to spray the tank-mix application from the time the biological and herbicide/pesticide were first tank-mixed to ensure that the minimum required number of bacteria will survive.

Last Updated: 30 May 2023

Please read product label carefully & follow application directions

Terms Used in Application:

In-Furrow Tank-Mix with Fertilizer:

With an in-furrow tank-mix, the biological is applied alone or mixed with a liquid starter fertilizer. The tank-mix is then applied in the furrow with the seed. The tank-mix planting window is the length of time the grower has to spray the tank-mix application from the time the biological and fertilizer were first tank-mixed to ensure that the minimum required number of bacteria will survive.

Note: All products listed in this chart have been tested according to samples provided to XiteBio Technologies Inc. However manufacturing quality can vary from lot to lot of an individual product. It is recommended that a jar test be completed prior to mixing to ensure physical compatibility. For more information on performing a jar test please visit <https://xitebio.ca/inoculant-and-biological->
