

# XiteBio® Yield+ for Legumes

Healthier Plants. Better Yields.

## Early-Post Tank-Mix Compatibility

Compatible Early-Post Herbicide/Pesticide Product Choices	Tank-Mix Application Window
Boundary®	8 hours
Broadstrike™	8 hours
Centurion® + Amigo® + Liberty®	8 hours
Classic® Grande + Glyphosate	8 hours
Factor® 540	8 hours
Frontier® Max	8 hours
Headline®	8 hours
Liberty®	8 hours
Odyssey®	8 hours
Prowl® H20	8 hours
Roundup®	8 hours
Sencor®	8 hours
Solo® WDG	8 hours
Viper® ADV	8 hours
XtendiMax®	8 hours

## In-Furrow Tank-Mix Compatibility

Compatible In-Furrow Fertilizer Product Choices	Tank-Mix Application Window
6-24-6	8 hours
10-34-0	8 hours
15-0-0-20	8 hours
15-0-0-20 + 28-0-0	8 hours
28-0-0	8 hours
Active BUILD™	8 hours
Alpine Bio20™	8 hours
Alpine Bio22 Micro	8 hours
Alpine G22®	8 hours
Alpine HKW18®	8 hours
Alpine K24®	8 hours
Alpine MicroBolt B®	8 hours
Alpine MicroBolt Mn®	8 hours
Alpine MicroBolt Zn®	8 hours
Bio-Forge®	8 hours

LS624	8 hours
LS924	8 hours
ManZinPhos™	8 hours
Nachurs® Bio-K®	8 hours
Nachurs® Triple Option®	8 hours
NutriPak™	8 hours
Sunalta Boron	8 hours
XiteBio® PulseRhizo®	8 hours
XiteBio® SoyRhizo®	8 hours

### Terms Used in Application:

#### Early-Post Tank-Mix with Herbicide/Pesticide:

With an early-post tank-mix application, the biological and herbicide/pesticide are mixed in a single tank and sprayed together as a solution/suspension via the same applicator. Early-Post tank mixes must be applied from the 0 to 6 leaf stage. The tank-mix planting window is the length of time the grower has to spray the tank-mix application from the time the biological and herbicide/pesticide were first tank-mixed to ensure that the minimum required number of bacteria will survive.

#### In-Furrow Tank-Mix with Fertilizer:

With an in-furrow tank-mix, the biological is applied alone or mixed with a liquid starter fertilizer. The tank-mix is then applied in the furrow with the seed. The tank-mix planting window is the length of time the grower has to spray the tank-mix application from the time the biological and fertilizer were first tank-mixed to ensure that the minimum required number of bacteria will survive.
